“I knew that if I failed I wouldn’t regret that, but I knew the one thing I might regret is not trying.” – Jeff Bezos

Dear Ivo Pinto,

I am writing to express my interest in the Solutions Architect position at AWS. With a background in data science and telecommunications engineering and industry experience at CERN and the University Carlos III of Madrid, I am confident I can contribute effectively to this role. I am particularly excited about the opportunity to help businesses build scalable, cloud-based solutions while learning from industry leaders.

## WHY ME?

---

From an early age, technology and problem-solving have been my guiding passions. Whether developing mobile applications, repairing motherboards, or troubleshooting my laptop after running unknown Linux commands, my curiosity and desire to learn have driven me to seek new challenges.

This passion has equipped me with a solid foundation in system architecture, networking, databases, problem-solving, and interpersonal skills. A notable achievement was redesigning a distributed parking management platform from scratch, where I utilized my expertise in server administration, full-stack development, and AWS. Additionally, I have a strong interest in business, having engaged in multiple ventures that involved direct customer interactions.

## WHY SOLUTIONS ARCHITECT?

---

As I pursued my Dual Degree in Data Science and Telecommunications Engineering, I explored various fields, including backend development, server administration, blockchain, cybersecurity, drones, and machine learning. Despite this broad exposure, I struggled to find a role that combined my technical skills with my passion for helping businesses build software solutions.

However, thanks to a keynote titled “The Life as a Solutions Architect in AWS” by Duarte Moura and Jorge Hernández, I discovered the Solutions Architect role. Motivated to deepen my understanding of this role, I pursued the AWS Solutions Architect Professional certification. After studying countless AWS services and business cases, I gained a profound appreciation for the depth and impact of the Solutions Architect role and the cloud.

## WHY AWS?

---

Surrounding myself with ambitious and talented individuals has always been my priority. Since high school, I have joined robotics clubs and university associations to grow my skills and learn from like-minded peers. Moreover, during this summer at CERN, I have met inspiring people and even shared lunch with a Nobel Prize winner!

AWS embodies this spirit of excellence and innovation. The emphasis on continuous learning and the commitment to deliver exceptional value resonate deeply with my professional aspirations. I see AWS as the ideal environment to learn from industry leaders while making a significant impact.

Joining AWS as a Solutions Architect represents a unique opportunity to combine my technical skills with my passion for helping businesses solve real-world challenges. I am eager to take the next step in my career and join the AWS team. I would be thrilled to discuss further how I can contribute to the AWS team’s mission to deliver exceptional value to customers.

Sincerely,

**Andres Navarro Pedregal**
